Dr Tony Buckmaster

Dr Tony Buckmaster has been active in the management of invasive animals for over 20 years. He has been involved in research involving the impacts and management of invasive species including rabbits. As part of the Invasive Animals CRC and Centre for Invasive Species Solutions, Tony led the Balanced Researcher Program which saw over 50 early career researchers successfully gain their PhDs. During this time Tony was also undertaking research into rabbits and running a malleefowl recovery project in western NSW.

As part of both the Invasive Animals CRC and Centre for Invasive Species Solutions, Tony has extensive experience in managing research and community engagement projects and programs spanning the breadth of the invasive industry. He worked closely with Rabbit Free Australia in successfully developing and lobbying for the National Feral Rabbit Management Coordinator program.

Tony recently retired from his position as the Principal RD&E Manger for the Centre for Invasive Species Solutions and lives on a small farm near Yass, NSW
